## Introduction

This manual has been created to offer Exact Synergy clients with templates and information that is useful for the creation of new ASP pages.

Other Exact documents that your organization will find helpful in working with Synergy to create these new ASP pages include:

- Synergy Implementation Manual
- Working Smarter with e-Synergy
- Database Documentation - CRM
- Database Documentation - Requests
- Database Documentation - HRM
- Database Documentation - Financials
- Database Documentation - Projects
- Database Documentation - Items
- Database Documentation - Logistics

Additional functionality can also be discussed with your Exact Certified Business Consultant.

We welcome any comments and enhancement ideas for this document from our customers.

## Extracting Information that You Want to See

This manual was written for non-technical Synergy administrators. We will show you how to use (by modifying) the sample ASP pages that we have included along with this manual to extract information from your database whether it is Synergy, Globe, Macola ES or Progression. The database we will use to extract information from doesn't matter – the principles are the same.

We will not go into many advanced techniques within this manual. A skilled programmer will be able to enhance these examples or will create their own ASP pages after they review these examples.

We have included a copy of each of these ASP pages for you to use as a template for the creation of new pages. By creating new SQL statements, it will be easy to create basic list ASP pages. As you go further into the manual, we will have examples of custom ASP pages with Searches and Exports to Excel. In this manual, fields that can be changed without affecting the results are printed in [blue](#).

Once created, these new ASP pages can be placed into your synergy directory and called by either using the Favorites, custom Start Pages, custom report templates or links from other Synergy buttons. The creation of additional Synergy buttons for hyperlinks will usually require your Synergy Implementor.
